Name: Afifa Syed **Roll no : 139** **Batch:T23**

Expt No. 6: To study and Implement Agile Software Project lifecycle using Jira with DevOps Pipeline Integration.

Project Name: (Food Delivery App Space)

Project Key: FDA

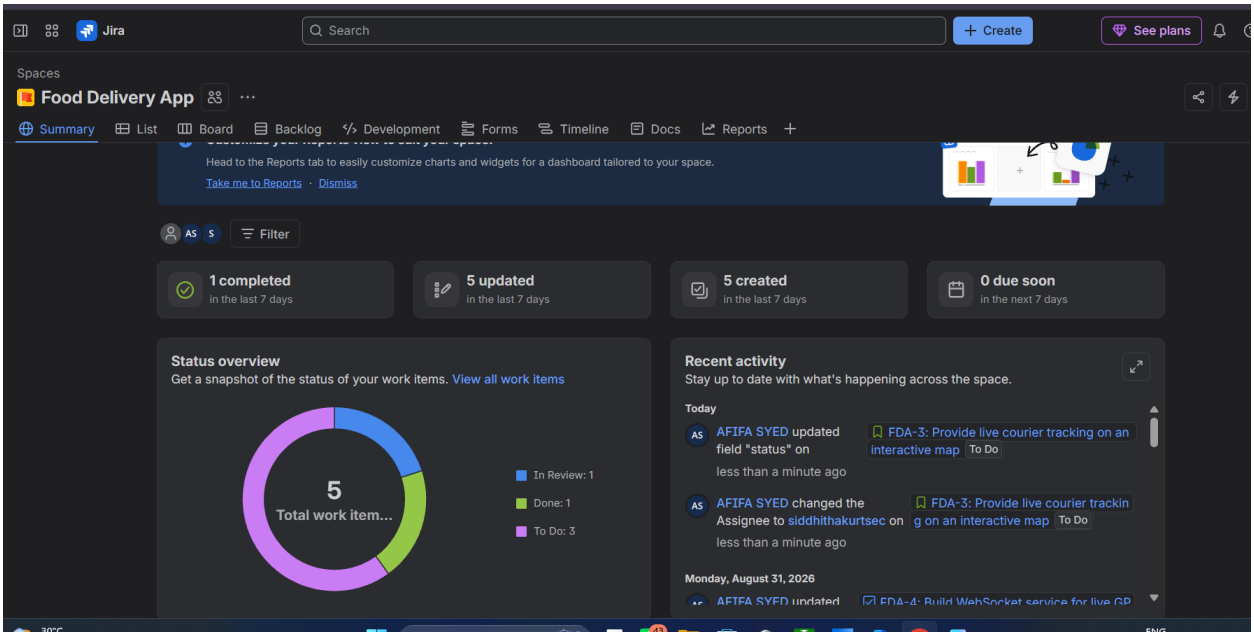

Collaborator Email: siddhithakurtsec@gmail.com

GitHub Repository: afifasyed123/Food-Delivery-System

STEP-BY-STEP PROCEDURE

Step 1: Scrum Project Creation & Team Setup

1. Navigate to Jira Cloud and create a new project using the **Scrum** template.
2. Configure project properties:
    - **Project Name:** Food Delivery App
    - **Project Key:** FDA
3. Invite project collaborators via the team management interface to assign team roles.

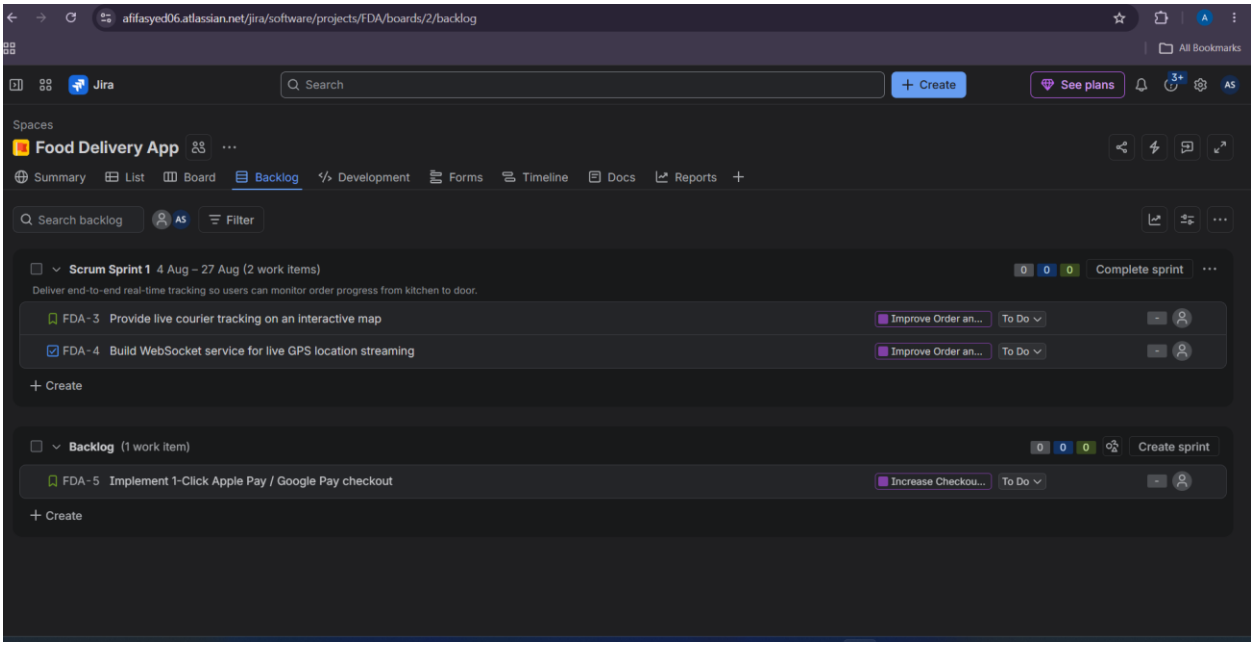

Step 2: Epic Definition & Product Backlog Refinement

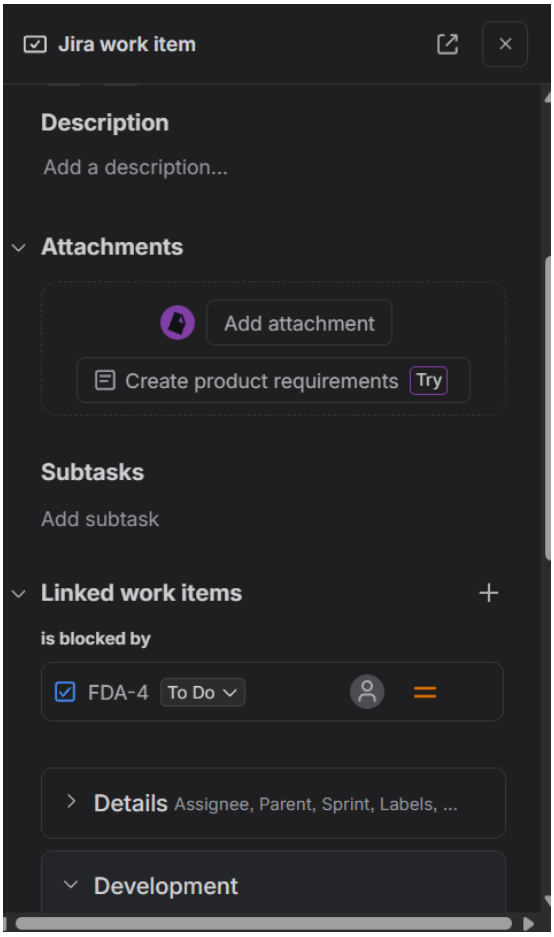

1. Navigate to the **Backlog** view and create strategic Epics (Improve Order and Tracking Experience, Increase Checkout Efficiency).

Name: Afifa Syed **Roll no : 139** **Batch:T23**

2. Create user stories and technical tasks under the backlog:
    - FDA-3: Provide live courier tracking on an interactive map (Story)
    - FDA-4: Build WebSocket service for live GPS location streaming (Task)
    - FDA-5: Implement 1-Click Apple Pay / Google Pay checkout (Story)
3. Assign each story/task to its parent Epic.
4. Establish item dependencies by opening FDA-3, adding a link relationship, and configuring **"is blocked by FDA-4"**.

Sprint & Product Backlog View

Issue Dependency View (FDA-3 blocked by FDA-4)

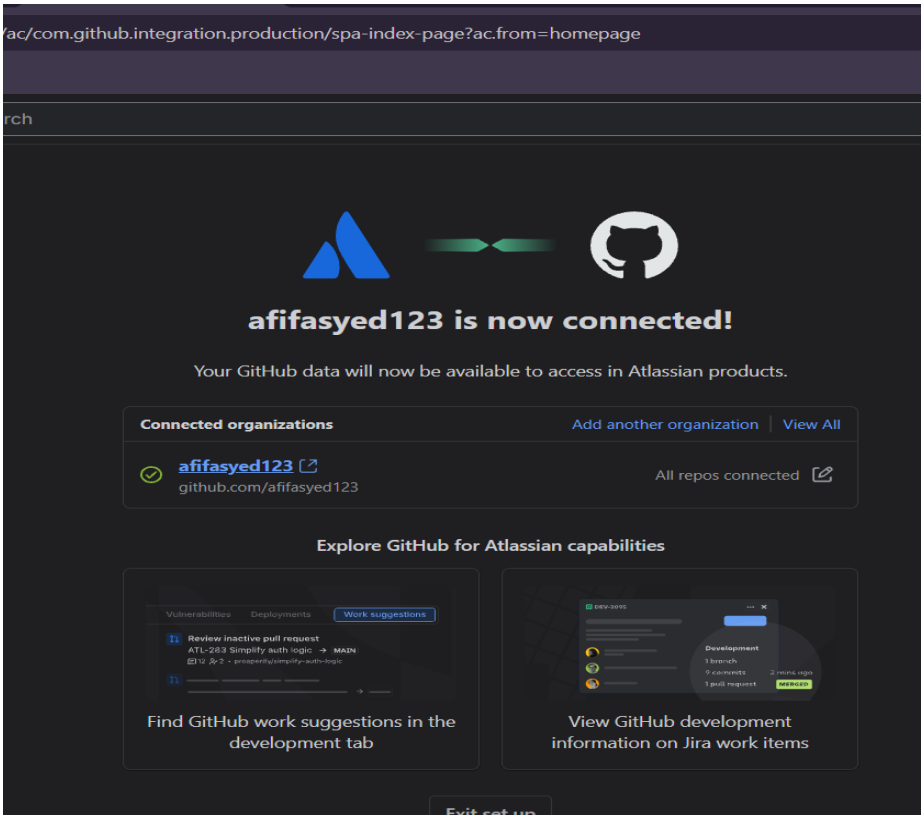

Step 3: Sprint Planning and Active Sprint Execution

1. Create an active sprint container (Scrum Sprint 1).
2. Prioritize items by dragging FDA-3 and FDA-4 from the Product Backlog into Scrum Sprint 1, leaving future scope (FDA-5) in the Product Backlog.
3. Define the Sprint Goal and time duration parameters, then click **Start Sprint**.
4. Access the **Board** view and add a custom workflow column (Review) positioned between In Progress and Done.

Step 4: GitHub Integration with Jira

1. Access the **Apps** or **Development** tab within Jira and install the **GitHub for Jira** application.
2. Select **GitHub Cloud**, authorize Atlassian permissions, and link the organization profile (afifasyed123).

3. Grant repository access permissions specifically to the project repository: Food-Delivery-System.

GitHub for Jira Connection Confirmation

Step 5: Code Commit & Automatic Issue Synchronization

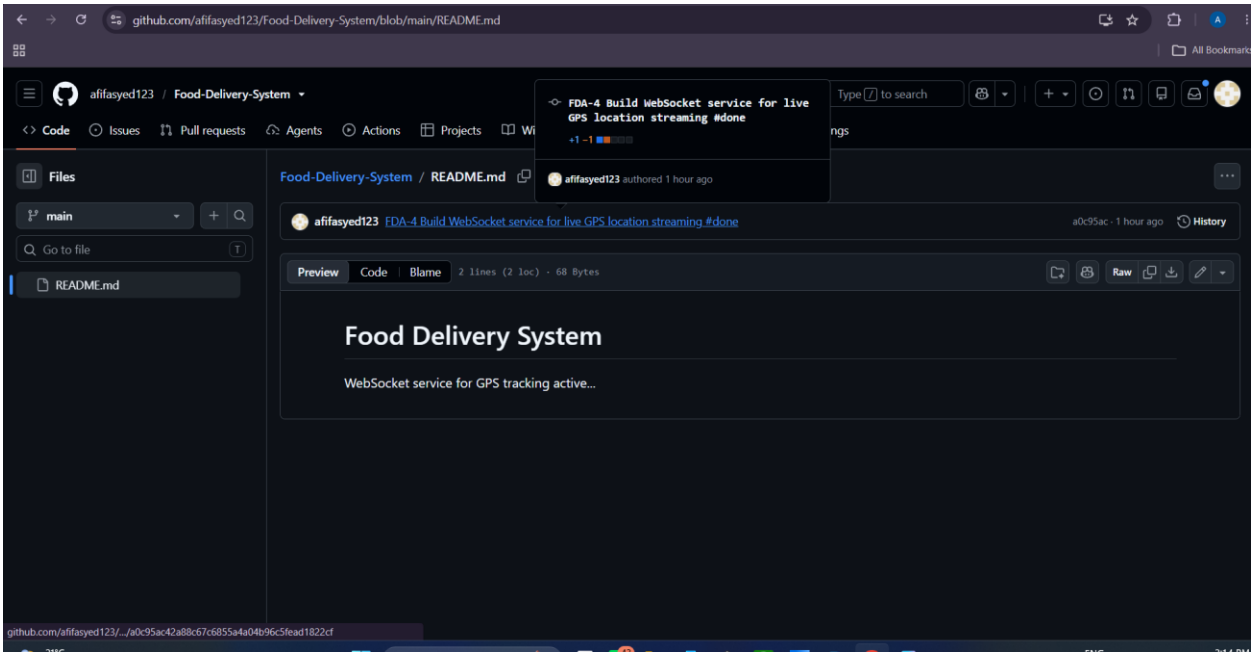

1. Open the connected Food-Delivery-System GitHub repository.
2. Modify repository files (e.g., README.md) and create a Git commit referencing the Jira issue key and smart command:

Plaintext

FDA-4 Build WebSocket service for live GPS location streaming #done

3. Commit the changes to the main branch.

Name: Afifa Syed **Roll no : 139** **Batch:T23**

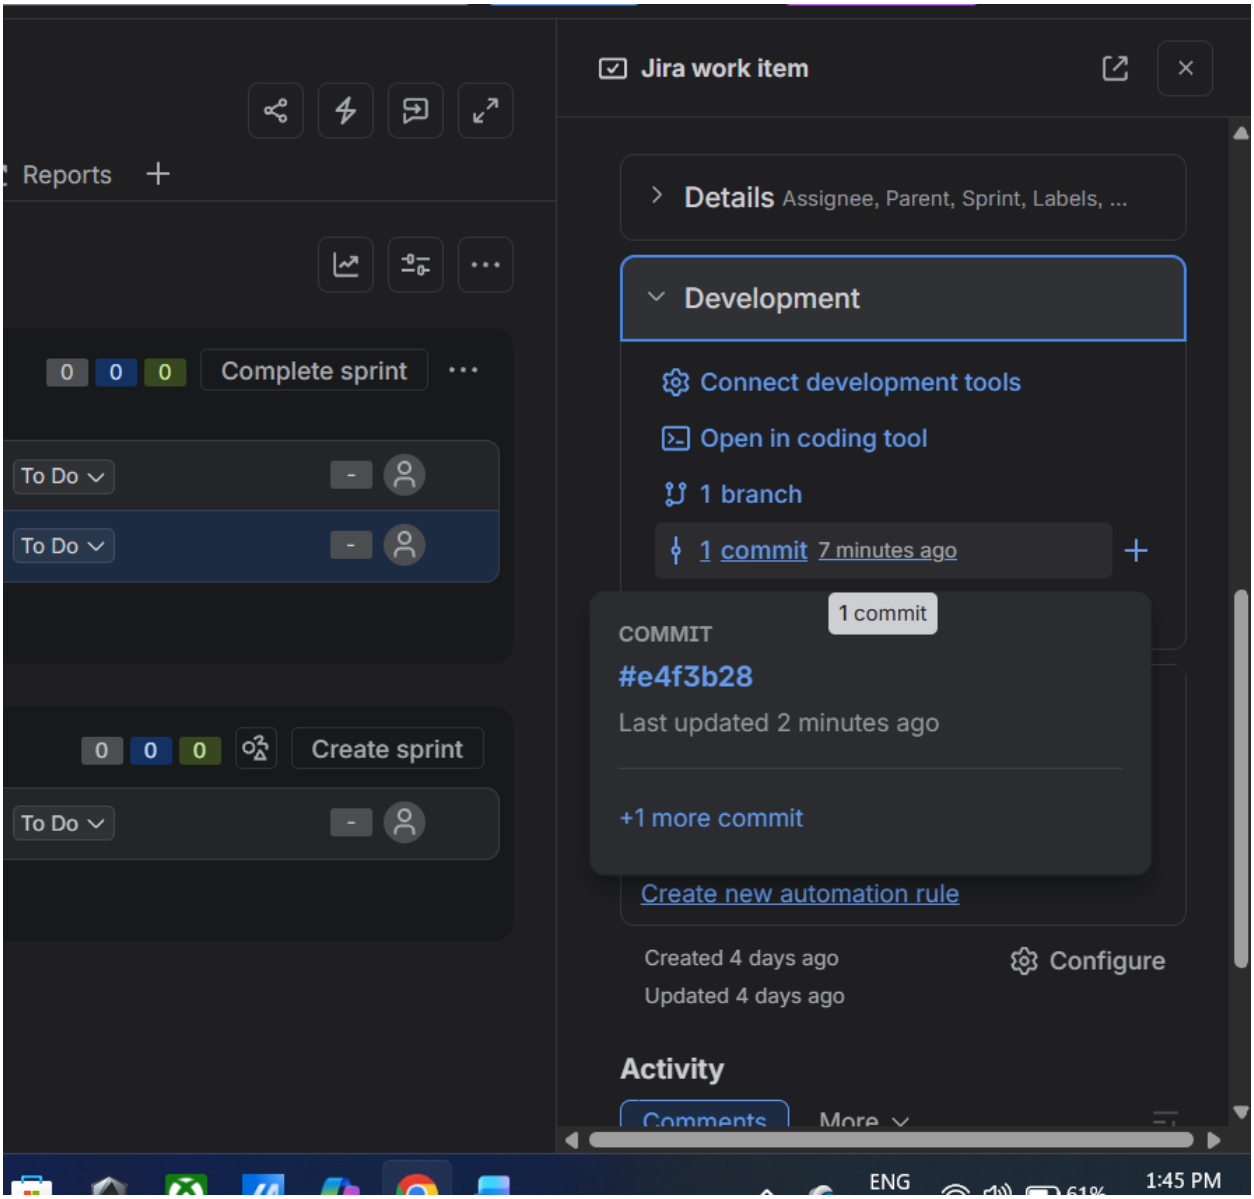

GitHub Commit History showing Commit Message with Issue Key

Step 6: Verification of Live Reflection in Jira

1. Return to the Jira board and navigate to work item FDA-4.
2. Open the issue details panel and verify the **Development** section.
3. Confirm that the commit hash and linked GitHub branch reflect directly within the Jira issue interface.
